Education

Postgraduate degree in Applied AI Software Engineering (in progress)
UNIPDS · Anhanguera, May 2026 - May 2027

B.S. in Software Engineering
Estácio de Sá, 2025

Teaching degree in Languages and Literature (incomplete)
Faculdade Anhanguera, 2018

Technical skills

Languages and frameworks
Python (Django, DRF, Flask, FastAPI, SQLAlchemy, Alembic, PySide), TypeScript and JavaScript (React, Vue.js, Next.js, Node.js, Vite), Rust (Tauri), PHP

Desktop and pipelines
Tauri, Electron, Qt/PySide, Autodesk Maya plugins, After Effects extensions, ShotGrid (Toolkit, automation, and integrations)

Front end and UX/UI
Design systems (React and Qt), Tailwind CSS, Chakra UI, Vuetify, Figma, Adobe XD, Sketch

Data
PostgreSQL, MySQL, Firebase Realtime Database, GraphQL

Infrastructure and integrations
Docker, AWS, GitLab CI/CD, Stripe, Mercado Pago, Google APIs, Mailchimp, Perforce, Mixpanel

About me

I'm a Full Stack Software Engineer with 12+ years of experience building products end to end, from UX/UI design and front end to APIs, databases, infrastructure, and desktop apps. I founded Creative Olympus, where I build and sell Momo, a desktop writing app with paying users, and work with VFX, games, and creative studios, turning slow, manual workflows into tools people rely on every day.

Experience

Founder & Full Stack Engineer

Creative Olympus · Dec 2021 - Present (4 years and 10 months)

My own software company (Brazilian PJ). Through it I build and sell my own product, Momo, and work as a contractor for studios and companies — which is why my client work since 2021 overlaps.

Momo · Founder, Engineer, and Designer
2022 - Present

- Took a local-first desktop app for novelists from zero to a commercial product with paying users.
- Tauri 2 (Rust) + React + TypeScript app for Windows (Microsoft Store), macOS, and Linux.
- Django 5 + DRF + PostgreSQL API for accounts, licensing, payments (Stripe and Mercado Pago), and releases.
- Marketing website with checkout and i18n in 3 languages (React, TailwindCSS, Framer Motion).

Roof Studio · Software Engineer | Pipeline Technical Director
Nov 2021 - Present

- Designed and built the 3D production pipeline, integrating ShotGrid (Autodesk Flow Production Tracking) with custom apps and Maya plugins.
- Moved the studio to a low-cost remote infrastructure, enabling secure remote work that was previously limited to the office.
- Built desktop tools (Tauri + React, Electron + Vue.js, PySide6), including a visual search app used in the film for The New Yorker's 100th anniversary.
- **Impact:** the pipeline and infrastructure I built made it viable to run the studio at low cost, connecting production, finance, and marketing.

Hype Animation · Software Engineer | Maya Tools Developer
Nov 2025 - May 2026

- Built Maya tools that sped up scene adjustments in the production of Galinha Pintadinha – O Filme, the franchise's first feature film, released in theaters in October 2026.

Assembly · Software Engineer and Designer
Jan 2024 - Dec 2024 (1 year)

- Replaced large spreadsheets with a full CRM, from UX design to deployment (React, TypeScript, Flask, MySQL, Docker, AWS).
- Integrated it with Flow Production Tracking to make cost evaluation easier.
- **Impact:** internal processes up to 70% faster.

Tangerine · Software Engineer and UX/UI Designer
Feb 2022 - Sep 2023 (1 year and 8 months)

- Built two integrated food-safety training apps from scratch: architecture, design, and implementation (Next.js, TypeScript, Chakra UI, Firebase).
- **Impact:** an idea turned into a complete product, translated into 3 languages.

Streetwise · Software Engineer

4 months

- Built an After Effects extension that automates versioning of advertising videos (React, TypeScript, ExtendScript).
- **Impact:** artists no longer build each version by hand, so multiple versions of the same spot ship in far less time.

Pipeline Front End Engineer

Wildlife Studios · May 2018 - Nov 2021 (3 years and 7 months, full time)

Built tools and integrations for the game production pipeline, serving animators, motion designers, and pipeline developers, as a Front End Engineer and UX/UI Designer.

- Designed and implemented design systems (React and Qt) used by frontend developers and designers.
- Created Maya plugins, After Effects extensions, desktop apps, and ShotGrid automations for the art pipeline.
- **Impact:** 60% to 80% shorter development time across design, frontend, pipeline, and creative teams.
- **Stack:** JavaScript, Vue.js, React, Electron, Node.js, Python, PySide, Django, PostgreSQL, MySQL.

UI/UX Designer and Front End Engineer

O2 Filmes (freelance client) · Nov 2019 - Mar 2020 (5 months, contract)

Designed and built a project management tool for a film production company, from branding and UX prototypes to the front end.

- Created the brand and product identity, and designed workflows and screens in Adobe XD.
- Developed most of the front end in React, integrated with a Flask backend.
- **Impact:** standardized processes and fewer handoffs between creative and management teams.

UI/UX Design Director and Front End Engineer

Nuvem Agência · Sep 2014 - May 2018 (3 years and 9 months)

Led end-to-end development of websites and monolithic systems for agency clients, combining UX strategy, UI prototyping, and front-end development. Also handled client service and sales.

- **Stack:** vanilla JavaScript, PHP, MySQL, WordPress, Sketch, Inkscape.

Earlier experience

Design, marketing, and IT support · 2011 - 2016

Roles that led me into software development, working with design, websites, and support.

- Accelera Vendas (Mar 2014 - Nov 2016) — Digital Marketing Manager and Junior Web Developer: WordPress sites, campaigns, and team coordination.
- Unitecnologia (Mar 2014 - Sep 2014) — IT Technical Support and Junior Developer: support, client training, and database maintenance.
- Freelance designer (2012 - 2014): graphic design work from late 2012 until early 2014, when I joined Accelera Vendas.
- Freelance computer maintenance technician (2011 - 2012): assembling, repairing, and supporting computers.
